Education

Cloud Development and Operations Graduate Certificate

Algonquin College – Ottawa, ON

Sep 2024 – Apr 2025

3.85 GPA

Computer Engineering Technology – Computing Science Advanced Diploma

Algonquin College – Ottawa, ON

Sep 2019 – Apr 2022

3.46 GPA

Projects

Felix Commercial Cleaning Platform | *React, TypeScript, Vite, Tailwind CSS*

Jan 2026

- Architected and deployed a modular frontend web application utilizing React, TypeScript, and Vite, establishing end-to-end ownership of the client intake architecture.
- Leveraged AI development tools to accelerate component generation, maintaining a rigorous attention to detail regarding code readability and security.
- Converted complex B2B business requirements into high-quality, responsive UI/UX designs using Tailwind CSS.

AI-Powered News Analyzer | *Python, FastAPI, SQLAlchemy, PostgreSQL*

Jan 2025 – Apr 2025

- Engineered a backend data layer using Python and PostgreSQL, optimizing database management and complex query performance.
- Maintained strict Git version control and collaborated with team members to resolve issues and deliver timely updates in an Agile/Scrum aligned environment.
- Automated API testing using pytest, validating endpoints and ensuring 100% functional reliability.

IoT Sensory Monitoring System | *Azure IoT Hub, Azure Stream Analytics, Blob Storage, JSON*

Nov 2024

- Developed a cloud-based IoT backend system simulating real-time sensor telemetry to monitor ice and weather conditions.
- Implemented secure device-to-cloud data transmission using Azure IoT Hub and validated JSON telemetry to ensure system reliability.
- Configured Azure Stream Analytics and Blob Storage to process, aggregate, and store real-time data for monitoring and analysis.

Order Management Service | *Java, Spring Boot, PostgreSQL, GitHub Actions*

Oct 2024

- Built a Java Spring Boot microservice using OOP principles, ensuring reliable message processing and robust system validation.
- Integrated GitHub Actions CI/CD pipelines to support automated builds and test execution, improving release reliability.
- Managed end-to-end cloud deployment with emphasis on environment validation and production readiness checks.

Shift Scheduling Application | *Java, Spring Boot, REST APIs, Flutter, PostgreSQL*

Jan 2024 – Jul 2024

- Developed a Java/Spring application focused on REST API design and structured data management.
- Performed iterative manual functional testing and data validation on a Flutter/Dart mobile application, identifying defects to ensure high software quality.
- Analyzed scheduling datasets and test results to identify core system inefficiencies, implementing structured improvements that reduced application logic conflicts by 20%.

Experience

Uncle Tetsu Ottawa | *Team Leader*

Dec 2022 – Present

- Lead a team of 10 staff, optimizing daily prep and service workflows during high-volume operations.
- Handle customer inquiries via phone, in-person, and email, ensuring timely resolutions and customer satisfaction.
- Engineered technical solutions, including a Discord bot and mobile calculator, to automate internal daily notifications, replacing manual logging and tracking systems.

Skills

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

Backend & Databases: Spring Boot, RESTful API Development, PostgreSQL, MongoDB, Cosmos DB, Data Modeling

Infrastructure & OS: Windows Server Environments, Windows 10/11, macOS, Linux/VMware, Azure Virtual Machines

Deployment & Configuration: CI/CD Pipelines, Docker, Git/GitHub Version Control

Testing & Tools: Unit & Integration Testing, Postman, Grafana
